

*NEW!*

# *SeleCT/SP™*

*Bringing premium technologies to cost-effective spiral CT*

*Elscint*

## *The affordable small spiral CT with big performance.*

*Elscent, the company which revolutionized spiral CT scanning with its Dual-Slice systems, now brings premium technologies and capabilities to the cost-conscious CT user. A high-throughput scanner, the new SeleCT/SP heralds a new era of affordable spiral performance.*

### **Advanced spiral capabilities**

SeleCT/SP covers 60 cm in a single 60-second spiral acquisition for CT angiography and multi-phase contrast examinations.

### **Comprehensive image processing**

A scanner and a workstation in one, the SeleCT/SP is an integrated multi-tasking imaging system. Processing power includes real-time multi-planar reconstruction, 3D and MIP imaging.

### **Solid-state detectors**

98% detector efficiency and compact gantry design maximize X-ray utilization. With SeleCT/SP cost effectiveness no longer means compromised image quality.

### **Large field of view**

A small scanner with big performance. Even large patients are readily imaged in the wide 485 mm FOV.

### **Universal connectivity**

Full DICOM 3.0 compatibility supports multi-modality and multi-vendor interfacing. A fresh new approach to comprehensive image management in times of cost-constraint.

### **Compact siting**

Big performance in a small scanner. A complete CT with only three components: bed, gantry and computer. SeleCT/SP, requiring a mere 17 m<sup>2</sup>, can be installed in virtually any site.
